

# Quiz Manager

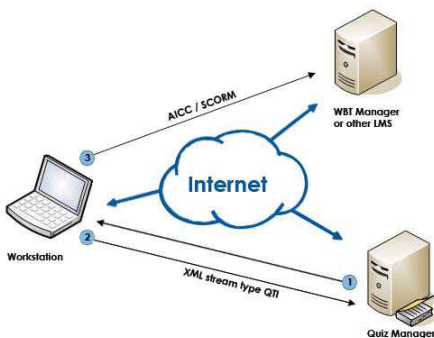

## Generator of online questionnaires

Quiz Manager is a comprehensive and user-friendly assessment tool designed to create and manage questionnaires and to analyse the learners' results online. This solution will enable you to assess and reinforce your trainings' efficiency.

**Quiz Manager** is a software package made for Training and Recruitment professionals wishing to design evaluation questionnaires. **Quiz Manager** is the only tool which is able to create questionnaires and analyse the results online.

**Quiz Manager** is a comprehensive solution Published by X-PERTeam which allows you to:

- create banks of questions and assessments
- organize tests according to learners' levels
- offer reports to analyse the results

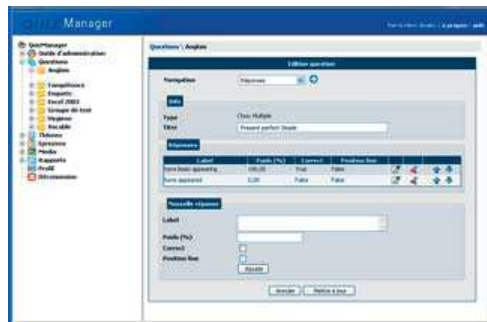

**Quiz Manager** can also be combined with your LMS (WBT Manager™, Saba™, etc...) to extend the possibilities of results analysis.

When combined with WBT Manager™ it is possible to:

- distribute an assessment to one or more identified learner.
- follow through with AICC/SCORM
- use the analysis reports directly in the WBT Manager™ interface.
- use the user data from the WBT Manager™ (group, users fields, ...) for the Quiz Manager statistics.

## A comprehensive online interface to create the questionnaires

**Quiz Manager** allows you to create a wide choice of questions (single or multi-choice, scheduling, matrix, text with blanks, numerical, open-ended questions...). You can easily add images, hypertext links and multimedia objects to your questions to create a realistic professional scenario.

Quiz Manager offers a user-friendly function to weight your questions in order to evaluate the level of knowledge or to measure the degree of satisfaction. It is also possible to create topics by grouping several weighted questions.

Once the questions have been written and organized in question banks you can assemble them into assessments. Quiz Manager can draw at random from the bank to create assessments.

The questions for an assessment are grouped by units, and at the end of each unit the calculation of an intermediate score can, as an option, adapt the level of the test.

The documentary properties on questions and assessments make it possible to create and manage an actual question bank which can be re-used.

## Key features

- Customisable respondent Interface
- Secure environment
- Intuitive and easy-to-use user interface
- Multi-language solution: English/French (by default), Spanish, Italian, German, ...
- Possibility to import questions via a CSV or QTI file
- Randomisation of the questions for the assessment with possibility to take the level into account and to add compulsory questions
- 2 levels of feedback: by response or question
- 3 types of feedback: text, multimedia or URL link
- Possibility to import or export assessment results from or through a CSV file
- Creation of customised reports
- ...

Generator of online questionnaires

## An ergonomic question reader

The respondents to the questionnaires only need a standard Web browser, and don't need to install any other plug-in apart from Macromedia FlashTM. It is possible as an option to limit the number of times one tries to answer a question and the time given. The assessment's author can also define rules to offer tests adapted to the level of learners.

Quiz Manager offers the possibility to define feedback by answer, by question or by assessment. The nature of the feedback can use text, sound or image. The interface for reading the questions is delivered with its Flash source code to enable customization to the colours of the company.

In the event of a network outage or a prematurely closed assessment, the answers are automatically saved and when the user restarts an unfinished assessment they will be reconnected to the last page that they were reading with their latest answers.

The answers are stored in the Quiz Manager database (detailed information), and saved in the LMS (synthesis information) which is AICC/SCORM compliant.

## Reports to analyse the results

The "reports" function allows an analysis of the tests or surveys wherever you are. This feature generates judicious analysis' functions.

You can obtain views presenting performance indexes per individual or group, compare outcomes or validate a result according to a profile.

In combination with other reporting tools, your own reports can also be produced and directly deployed into Quiz Manager.

You can also consult the comments or the opened questions of the respondents.

## An administration module to manage the server

The administration module offers all server management features. It is possible to create users with specific permissions for a broad distribution of Quiz Manager within your organization and to offer judicious security and confidentiality guaranties.

## Compliance with standards

Quiz Manager is based on the Windows IIS Dot Net technology and meets the standards of the e-learning industry.

This software which is AICC and SCORM compliant can be perfectly integrated into your elearning platform. Moreover, it is also possible to import questions saved in QTI V2 format.

## Required configuration

Server:  
Pentium 4, 256 Mb  
Ram, Windows  
2000, XP or 2003  
Dot Net Framework  
SGBD SQL Server or  
Oracle  
Administrator:  
A Web browser  
version 4 or more  
with an intra/internet  
connexion.

No plug in or other  
application needed.  
A monitor with a  
resolution 800\*600  
is advised.

Respondent:  
A Web browser version  
4 or more with  
an intra/internet  
connexion; Flash  
Plug-in; a monitor  
with a resolution  
800\*600 is advised.
